new displacing the old is an inevitable process and provided it is done at a reasonable pace need not be disturbing and is often imperceptible. It is the speed of change which matters, and that is what caused the trouble in the Protectorate. In England the change from horse-drawn transport to motor transport took twenty years or more and there was ample time for readjustment. In Aden it took as many days from the time a new major road was open to motor traffic, and the unemployed camel men sat nursing their rifles and wondering how to prevent their animals and themselves from starving. It was not long before they noticed the weapon in their hands and commenced to use it to drive the lorries off the roads. The State and Political Authorities intervened before too much damage was done and negotiations resulted in agreements which restricted the use of lorries to named kinds of merchandise, and so time was gained for readjustment.

The Eastern Aden Protectorate was more affected than the Western by road development and on more than one occasion troops had to be used to persuade the camel men and their friends to be sensible and not to interfere with the lorry traffic which might have had very serious consequences. The Wadi Hadhramaut, that vast cut through the limestone plateau of the Jöl filled with palm groves and white-walled towns, peopled by the most astute and the hardest business men in the world, was subject to droughts which twice in living memory had led to famine: the reason for this had been that the whole irrigation system depended on the availability of bullocks to draw water from the shallow wells and when, during the droughts, the corn crops had failed, the animals had either to be fed on seed grain or be left to die of starvation; in the former case it meant that when the rains did come, there was no seed to sow, in the latter that there were no animals to draw water. The solution was to eliminate the dependence on bullocks and make available to farmers and date garden owners small diesel pumps with which to irrigate their land. They paid cash for the pumps if they could, or if they couldn't they put down a deposit and paid the balance in monthly instalments. A maintenance service, based on a central workshop, which had been set

up at Saiyun by the Quaiti and Kathiri States, was provided and was controlled by one of Hugh Boustead's young men. Diesel oil was essential for the pumps and it had to be brought from the coast at Mukalla by lorry, and so it was that the camel men, however disgruntled they might be, must not be allowed to damage the roads or impede the oil lorries.

The pump scheme was supplemented by grain stores set up in the main towns and larger villages and regularly inspected to ensure that the grain had been properly rotated. At each harvest new grain was bought and the old grain sold, thus keeping the stocks fresh. Mercifully all went well with the rainfall during my tour of duty and we did not have to put our anti-famine measures to the test.

I cannot leave the subject of development without making a brief reference to the political side. In most States in the Western area of the Protectorate the old form of complete autocratic government has given place to government by the Ruler with the advice of a Council, and in some States the next stage of development of Councils with executive powers has been reached, while in Lahej there is the further refinement of a Legislative Council. Generally speaking these Western innovations where they exist are only in the kindergarten stage and the Ruler is still the central figure upon whose personality the Government of the State really depends. For instance, there is one important State which has no Council at all, but a very able Ruler who governs justly and firmly and whose finances are in a sound condition; while another and larger State has the whole façade of modern governmental institutions but a Ruler whose real interests are elsewhere and his people do not fare so well and the State's finances would mystify the most astute of accountants. The personality of the Ruler is still of paramount importance, but change is coming swiftly.

In the Eastern area the main progress has been made in the centre, where in the Quaiti and Kathiri States administrations have been firmly established and even Town Councils are functioning with reasonable efficiency. These States have been lucky in having Rulers who had the good sense to pay heed to their able advisers. In the two outlying States, the Wahidi
